MPCI Schedule of Insurance: Exclude Coverages with No Acreage Lines

AgriNet

The option to exclude coverages with no acreage lines from the MPCI SOI at both the policy and batch levels, is now available. Within the print menu, the "Exclude Coverages with No Acreage Lines" setting can be found under Printing Options. When selected, any coverages without acreage lines will be omitted from the Coverage Summary Page.

Rainfall Index Certification Form

AgriNet

The updated Rainfall Index Certification Form features a fresh design that aligns with the new RMA requirements. On the Print Options Screen, you will now find the option to include a Blank Lease Certification Continuation page. This provides additional space to document multiple CLUs, ensuring all required information can be captured in a single form.

FIP-SI (Fire Insurance Protection-Smoke Index)

FIP-SI is now available for the Grapes commodity as a Supplemental Coverage within Quoting (Max Estimate). This option is available on grapes in California, Idaho, Oregon, and Washington. It may be selected in conjunction with SCO and ECO supplemental coverages. FIP-SI protection will be incorporated into Quick Quote in an upcoming sprint release.

Batch Max Estimate Price Edit

The Batch Max Estimate has been updated to feature the edit price feature for corn, soybeans, wheat, peanuts, and cotton. To enable the Edit Prices icon, at least one of these eligible commodities must be selected from the Commodities drop-down menu. Only the selected eligible crops will appear in the Add Batch Price window. After applying the override price and volatility values, the user must click Save to confirm the changes. A disclaimer will appear at the bottom of the window to notify the user of the update.

LRP Quick Quote

AgriNet

The Quick Quote LRP improvements streamline the workflow by reducing clicks and optimizing default settings. The Effective Date field now includes a calendar icon for manual date selection, along with an optional checkbox located above the icon- that lets the user automatically apply the last five days.
