

WEATHER CONTROL IS STILL A “WHAT IF,” BUT OUR POWERFUL, CUTTING-EDGE CROP INSURANCE SOFTWARE? THAT’S A “WHAT IS.”

Our completely redesigned **AgriNet** interface features a comprehensive **dashboard**, which provides a host of great new features:

- **View the status of your entire book of business at a glance.** Colorful, automatically updated pie charts make it easy to see how your business is doing.
- **Spend less time printing management reports.** The dashboard can provide almost all the information you need at a single glance.
- **View customized policy data.** The dashboard allows you to apply multiple filters to view policy information with more flexibility than ever.
- **Use your dashboard as a quick and easy to-do list.** Filter to the policies which need attention—for example, policies with missing production—and work your way through the list.
- **Enjoy instant navigation to your policies.** Just click an item in the dashboard’s grid to go to that policyholder’s summary page.

We can’t do much about the weather, but we can make your job easier and less time consuming. That’s powerful stuff.

ARMtech® understands how important the right business tools can be to the success of your agency. That’s why we’re excited to announce we’ve added even more power to the most comprehensive crop insurance software on the market. A new streamlined, web-based version of AgriNet® fuses the innovative features our agents already enjoy with enhanced speed and functionality.

Call **800.335.0120** to have one of our friendly marketing representatives walk you through the new **AgriNet** platform or visit arnt.com/agrinedemo to see a demonstration.
