## Post-Application Coverage Endorsement (PACE)

The **PACE** program provides insurance for conservation-minded corn farmers who split-apply nitrogen fertilizer.

The Post-Application Coverage Endorsement is the latest result of the RMA's recent efforts to reward conservation and sustainable farming among American producers.

The program is intended to provide coverage for growers who "split-apply" nitrogen to their corn crop. The practice of split-applying, in which farmers spread their fertilizer application across multiple treatments throughout the growing season rather than applying it all at once, is believed to be better for the environment and saves money for the producers who implement it.

PACE will indemnify policyholders who commit to split-applying nitrogen fertilizer and subsequently find themselves unable to carry out adequate nitrogen application during the growing season, and who suffer a projected yield loss as a result.

PACE is available for non-irrigated corn in certain counties in Illinois, Indiana, Iowa, Kansas, Minnesota, Michigan, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin. Prevented planting acreage, acreage with CAT coverage, and acreage designated as high-risk land may not be insured under PACE.

*This summary is for general illustration purposes only; consult your crop insurance agent and read all policy provisions before making a decision about any crop insurance product.*

AgriSompso North America, Inc. is an Equal Opportunity Provider.

#14379\_011022

The PACE sales closing date is March 15.

Provides protection for farmers who split-apply nitrogen and are unable to make in-season applications.

Split-applying nitrogen helps conserve natural resources and saves farmers money.
